Gas Compression

Valerus provides first-rate new and remanufactured compressor packages for any type of application from 25 to 8,000+ hp. With an average career span of 25 years per employee and a solid network of global alliances, our customers know the equipment we provide will operate at peak efficiency, which translates into more uptime and profit.

Onshore or offshore, domestic or international, Valerus can provide a compressor package or even the entire compressor station, for any type of application. We can also provide a maintenance plan to fit your needs, whether they include sales, contract compression, operations and maintenance, or just maintenance. We have the expertise our customers need for success, specializing in:

- Wellhead Compression
- Gas Gathering
- Gas Storage
- Vapor Recovery
- Pipeline Booster Stations
- Injection (Air or Gas)
- Gas Lift
- CNG
- Gas Process

In addition to high-quality new and remanufactured compression equipment, we also offer an array of acquisition and lease-back programs which allow our customers to free up capital and reinvest in other projects.

So when looking for a reliable gas compression source for your reciprocating or rotary compression needs, look no further than Valerus.
